

SYSTEMS RESILIENCE

How do we enable a sustainable & secure future?

When: Friday, October 14, 9:00-10:30AM ET Where: Zoom Webinar

Climate change, geopolitical strife, and extreme events all regularly compromise essential infrastructure and services. To build a resilient future, one able to reduce, absorb, and recover from the impacts of disruption, we must find ways to plan, invest, and align across a variety of systems.

Join **The George Washington University** and the **Council of Engineering Systems Universities (CESUN)** for a webinar event where we will discuss resilience efforts at a local, national, and global scale. We seek to identify policy, education, and research needs for increasing preparedness and exploring the societal transformations that will enable a more resilient future. To attend this webinar, please <u>RSVP here</u> and follow the instructions in the Zoom confirmation email.

Speakers:

- Alice Hill, Council on Foreign Relations
- Kenya Troutman, DC Homeland Security and Emergency Management Agency
- Dr. Costas Samaras, White House Office of Science and Technology Policy
- Stratos Tavoulareas, Energy Advisor
- Dr. Babak Heydari, Northeastern University
- Dr. Caitlin Grady, The George Washington University (Moderator)
